WELCOME THE NEW SNUBIES

SPOTLIGHTS

Our brother Ali just published a research paper on diagnostic runtime for autonomous vehicles using deep learning and statistical theory, creating a new method called "Deep Learning Informed Martingales for Detecting and Categorizing Distribution Shifts,". This new method is able to outperform existing methods by 50-70% in terms of speed and accuracy.

Our brothers Ali and Ori are part of the prestigious Stanford Technology Ventures Program Mayfield Fellows 2024 Cohort. They continue a long running tradition of SNU's being present in almost every Mayfield Fellows Cohort. Well deserved!
